SSI Computer Labs and EID Use.

Each day you will be required to log in with your UT EID and password to use the lab computers and software for your 2018 SSI Course.

If you have forgotten your UT EID, or need assistance with retrieving your password, please see the UT EID Self Service Tools link below. If you have any questions about your UT EID and Password for the Institute, please contact SDS Administration Staff by May 22nd.

UT EID Self Service Tools: ldmanager.its.utexas.edu/eid_self_help/

UT EID Tips:

- **UT EID**: If you have forgotten your UT EID, you can use the online UT EID Self Service Tools to reset your password. Select the Find/Reset My Password option, and you will be given several options for resetting your password, including a password hint (for guest UT EIDs only), a password reset email, and your password reset questions. If you are unable to reset your password using these options, you will be provided with contact information for further assistance with your UT EID password.

- **UT EID Password**: Although your UT EID password does not expire, for good password security you should change it regularly. To change your password, use the self-service tool. For information on creating good passwords that are difficult to crack, refer to the Choosing a Strong Password option.

- **Locked UT EID**: Your UT EID may become locked because it hasn’t been used for a while, because there have been too many invalid logon attempts, or for security reasons. If your UT EID is locked, go to the EID Self-Service Tools page and select Find/Reset My Password for assistance.
